Integrate, Automate, Secure

Imagine your organization integrating data between applications, improving data quality, and automating processes. Imagine your organization using an easy configuration, not coding, to implement this approach. Imagine your organization dramatically reducing the cost and time of integration.

Meet Yurbi Connect-- where your organization can make these images a reality.

INTEGRATE

Integration Challenges Increase Costs

Does your organization spend many hours manually copying and/or populating data between systems or spend many hours keeping a set of complicated integration scripts monitored and running?

Yurbi Connect cuts costs by integrating applications and automating processes, reducing the many hours your organization usually spends on these tasks down to a few minutes.

AUTOMATE

No Coding Necessary

Using the Yurbi Platform

Yurbi Connect provides an easy to use, drag and drop interface, which requires only configuration, no custom coding. This saves considerable time and cost compared to the alternatives of writing custom scripts or coding, implementing complex and limited out-of-the-box vendor tools, or implementing expensive third-party integration tools. Yurbi Connect creates powerful and intelligent workflows to **automate** data migration and process **automation**.

SECURE

Limit Data Access to Those Who Need It

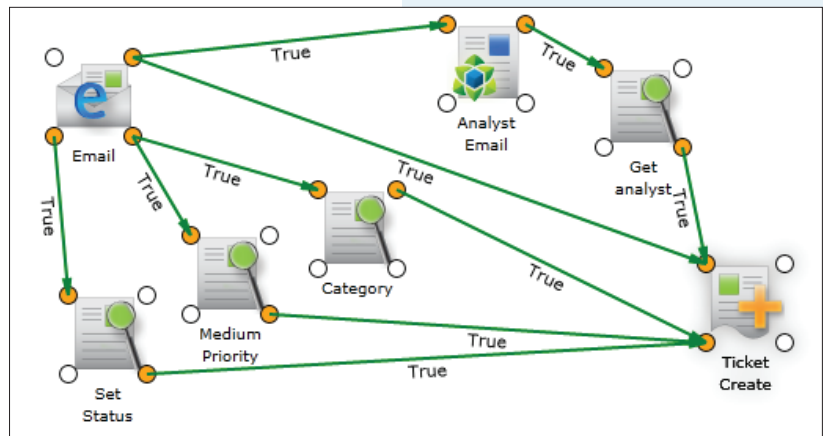

Yurbi Connect has security built-in that limit users' data access through security policies that can be specified to the user level. Yurbi Connect eliminates the need to purchase extra user licenses to see data in vendor solutions and opens the data to those who need to see it in an easy-to-use interface.

yurbiconnect is available as a stand-alone product or as a part of the Yurbi Platform where it is integrated with advanced BI functionality and reporting. For more information about Yurbi and Yurbi Connect please visit www.yurbi.com.

Why Yurbi® Connect?

- Minimize human data entry time and errors through automated data integration
- Increase speed of data integration
- Increased SLA compliance
- 100% Web-based creating a small infrastructure footprint
